## Excellent dragline mats and crane mats

---

<b>Species</b>	These mats are constructed of fully Mora beams on the outside and inside Wamara. The mix of these two species will enable the client to use this mats in very hard conditions. As Mora and Wamara are being characterized by its hardness and durability.
<b>Seizes</b>	All standard seizees are possible. Starting from 10 cm up to 30cm and lengths from 5 till 11,8 meter.
<b>Usage</b>	very heavy excavators, draglines, cranes and bulk transport
<b>Specification</b>	The mats are constructed of beams of 20cm wide. Depending on the thickness are respectively 19mm, 24mm and 32mm steel bolts are used. All steel bolts have strong washers and nuts. The nuts can be tightened individually
<b>Construction</b>	constructed of sawn beams with tight and neatly boxed hearts every beam with strong nail plates. Other short ends painted. All sides top and bottom chamfered. All crane mats have standard 2 slightly tapered pick holes in the middle beam for easy transport and movement of the mats.
