Premium dragline mats & crane mats

Species	These mats are constructed of fully Mora beams. Mora is a very suitable specie because Mora has a very interlocked grain. Other very relevant properties are hardness, bending strength and elasticity.
Seizes	All standard seizures are possible. Starting from 10 cm up to 30cm and lengths from 5 till 11,8 meter.
Usage	heavy excavators & cranes and heavy duty transport
Specification	The mats are constructed of beams of 20cm wide. Depending on the thickness, 19mm, 24mm or 32mm steel bolts are being used in the mat. All steel bolts have strong washers and nuts. The nuts can be tightened individually afterwards
Construction	The mats are constructed of sawn beams with tight and neatly boxed hearts with strong nail plates. Other short ends painted. All sides top and bottom chamfered. All crane mats have standard 2 slightly tapered pick holes in the middle beam for easy transport and movement of the mats. All holes are drilled countersunk.
